

ERDAS Image Extraction Engine

Select your image subset.

Choose how the image is delivered.

Store and serve imagery with ERDAS Image Web Server and let users take away copies of their areas of interest. The ERDAS Image Extraction Engine lets users automatically generate subsets of image mosaics that they can use offline. It makes your imagery more accessible, more portable and more valuable.

Output to Multiple Formats

Images can be output in ECW, JPEG 2000, tif, png, jpg or pdf formats.

Multiple Delivery Methods

Browser

For smaller image subsets the user is taken instantly to the new subset in their browser.

Email / Download

The user is sent an email when their request has been completed. This email contains the internet address of where they can download the image.

CD or DVD

Place the requested image in a production line for CD or DVD production.

Re-projection On-the-fly

Requests for image subsets are automatically re-projected to the users desired datum / projection.

Customize and Integrate

Integrate the Extraction Engine to work within your existing business processes. Add it to your business workflows or incorporate eCommerce modules.

All interactions are made with a simple XML interface.
