

ERDAS Image Integration Framework

ERDAS Image Integration Framework integrates large geospatial imagery datasets with different geo-datasets through your web browser. Simultaneously access many disparate WebGIS and image services in the same application view. Online processing capabilities allow users to create customized views of information.

Access massive images and different GIS

Combine your GIS datasets with 1000's of gigabytes of imagery served from Image Web Server to provide a complete online spatial viewing application. Access data from any server including ESRI® ArcIMS/SDE® server and OGC compliant databases.

Quick deployment

With a robust development model your existing infrastructure and services can be integrated and running quickly. There is no need to change your existing infrastructure!

Extensible and scalable

The ERDAS Image Integration Framework grows with your organization, and easily copes with the demands of the largest organizations. Custom modules can be added to accommodate specific business processes.

Online image processing

Make individual data layers transparent or apply transforms, all from your web browser. Everyone can create the exact dataview they need.
